Professional Summary

Flutter Developer with freelance experience since September 2024 in real-time messaging, REST API integration, and local data persistence. Published applications on Google Play and a Flutter package on pub.dev. Experienced in BLoC/Cubit, Clean Architecture, and native Android development with Kotlin.

Technical Skills

Languages: Dart, Kotlin

Mobile: Flutter, Android, Android IME, Responsive UI, Localization, RTL

State Management: BLoC, Cubit

Backend & APIs: REST APIs, Firebase Authentication, Cloud Firestore, FCM, Cloudinary

Networking & Storage: Dio, SQLite, SharedPreferences, Caching, Pagination

Architecture & Quality: Clean Architecture, Feature-Based Architecture, Debugging

Tools & Deployment: Git, GitHub, Android Studio, VS Code, Google Play Console

Work Experience

Flutter Developer

Freelance

Sep 2024 – Present

Remote / Cairo, Egypt

- Develop mobile applications from requirements through implementation, covering UI, API integration, authentication, local storage, and state management.
- Build reusable widgets and BLoC/Cubit features with pagination, caching, and error handling; debug UI, asynchronous state, and networking issues using Git and GitHub for version control.

Selected Projects

Piko – Real-Time Chat Application

Flutter, Firebase, BLoC/Cubit, FCM | [GitHub](#)

- Built real-time messaging with Cloud Firestore, typing indicators, online presence, and stream-based UI updates using BLoC/Cubit.
- Integrated push notifications with FCM and media storage with Cloudinary; reduced unnecessary widget rebuilds during live updates.

Wallune – Wallpaper Application

Flutter, SQLite, REST APIs | [Google Play](#)

- Built and published a Flutter wallpaper application with categories, search, and locally stored favorites using SQLite.
- Migrated content from AWS to a static GitHub-hosted backend with structured metadata and a search index.

Checkmate Elite – Chess Application

Flutter, Clean Architecture, BLoC | [GitHub](#)

- Built a chess application with BLoC-managed game state, reusable board components, animations, and responsive layouts using Clean Architecture.

context_menu_android – Published Flutter Package

Flutter, Dart | [pub.dev](#)

- Published a reusable package bringing iOS-style context menus to Android, with background blur, animated previews, nested submenus, and a wrapper API for integration.

RCKeyboard – Android Keyboard Application

Kotlin, Android IME, SQLite | [Google Play](#)

- Developed and published a multilingual Android keyboard with custom layouts, suggestions, auto-correction, and local dictionaries.
- Implemented swipe typing, cursor control, persistent clipboard tools, and theme customization; improved input handling, background-image caching, and lifecycle stability.

Education

BSc in Business Information Systems

Al-Asun Higher Institute, Cairo, Egypt

2023 – Present

Training & Languages

Flutter & Dart Training: Udemy – Eng. Abdullah Mansour

Languages: Arabic (Native), English (Intermediate)
