

Omar Mohamed

Flutter Developer — Mobile Application Developer

Cairo, Egypt — omar.mohamed.flutter@gmail.com — +20 106 506 7453

[LinkedIn](#) [GitHub](#) [Portfolio](#)

Professional Summary

Flutter Developer with hands-on experience building mobile applications using Flutter, Dart, BLoC/Cubit, Firebase, REST APIs, Dio, and SQLite. Experienced in real-time applications, API integration, responsive UI, local data storage, and native Android development with Kotlin. Built and published mobile software with a focus on clean architecture, reliable state management, debugging, and performance.

Technical Skills

Languages: Dart, Kotlin

Mobile: Flutter, Android, Android IME, Responsive UI, Material Design, Localization, RTL

State Management: BLoC, Cubit

Backend & APIs: REST APIs, Firebase Authentication, Cloud Firestore, Firebase Cloud Messaging (FCM), Cloudinary

Networking & Storage: Dio, SQLite, SharedPreferences, Caching, Pagination

Architecture & Quality: Clean Architecture, Feature-Based Architecture, TDD, Unit Testing, Reusable Components

Tools & Deployment: Git, GitHub, Android Studio, VS Code, Google Play Store

Work Experience

Flutter Developer

Freelance

Sep 2024 – Present

Remote / Cairo, Egypt

- Develop Flutter applications from requirements through implementation, including responsive interfaces, REST API integration, local storage, and application state management.
- Build and maintain features using BLoC/Cubit, reusable widgets, feature-based project organization, caching, pagination, and structured error handling.
- Integrate Firebase Authentication, Cloud Firestore, Firebase Cloud Messaging, Cloudinary, SQLite, and Dio across different mobile application projects.
- Debug UI, networking, asynchronous state, and performance issues while using Git and GitHub for feature development and version control.

Selected Projects

RCKeyboard – Android Keyboard Application

2026

Kotlin, Android IME, SQLite — [Google Play](#)

- Developed and published a multilingual Android keyboard using Kotlin and the Android Input Method Editor (IME) framework, including custom layouts, suggestions, auto-correction, local dictionaries, and SQLite-backed data.
- Implemented multi-touch input, long-press actions, cursor control, haptic feedback, clipboard tools, theme customization, and performance-focused input and lifecycle handling.

Piko – Real-Time Chat Application

2025

Flutter, Firebase, BLoC/Cubit, FCM — [GitHub](#)

- Built a real-time Flutter chat application with Cloud Firestore, BLoC/Cubit, typing indicators, online presence, stream-based UI updates, and responsive layouts.
- Integrated Firebase Cloud Messaging for push notifications and Cloudinary for media storage while reducing unnecessary widget rebuilds during real-time updates.

Wallix – Wallpaper Application

2025

Flutter, Dio, REST API, BLoC/Cubit — [GitHub](#)

- Developed a wallpaper application with search, categories, favorites, infinite scrolling, API-driven content, caching, and pagination.
- Implemented image editing and preview features including cropping, blur effects, responsive image rendering, and centralized networking and error handling with Dio.

Checkmate Elite – Chess Application

2025

Flutter, Clean Architecture, BLoC — [GitHub](#)

- Developed a Flutter chess application using Clean Architecture and BLoC for structured game-state management, reusable board components, animations, and responsive layouts.

context.menu.android – Flutter Package

Flutter, Dart, Reusable UI Components

- Published a reusable Flutter package for Android-style context-menu interactions with a simple API designed for integration across Flutter applications.

Education

BSc in Business Information Systems

2023 – Present

Al-Alsun Higher Institute, Cairo, Egypt

Certification & Languages

Flutter & Dart – Build iOS and Android Apps, Udemy – 42+ hours

Languages: Arabic (Native), English (Intermediate)
